

EFLO Automatic egg collection system

Functions

Technology joins egg collection. **Facco** makes the **EFLO** Farm Manager available, the completely automated egg collection system that allows the following in real time and already from the main screen:

- Constantly monitoring the running of the conveyor and the egg flow in it
- Viewing conveyor capacity at the unloading point in the egg room
- Viewing the total number of eggs unloaded by each conveyor
- Viewing the number of eggs unloaded by each individual house in the conveyor
- Viewing the state of each individual house of the poultry farm complex
- Viewing the advancement of the collection of each house in real time
- Viewing the immediate Egg Flow/hour of each house
- Viewing, with just a simple click, the number of units counted for each individual egg counter
- Viewing the residual collection time of each house
- Monitoring the connections and checking communication among the various uses installed
- Centralized alarm management
- Creating daily reports and graphs on farm productivity

Apart from viewing, by using simple masks, there is also the possibility of:

- Setting the collection start up – stop times, based on the day of the week
- Configuring and then enabling collection automatism (recipes)
- Choosing the most suitable flow in Egg/Hour based on the Selector and the personnel present
- Managing the collection in Manual mode by means of simple masks
- Carrying out "early collection" operations, considerably reducing collection times

Facco naturally guarantees complete product assistance through its technicians, also with specific *remote operations*.
